Fire Arms Marking Solution

The Kwikmark dot peen marker is an ideal solution for marking firearms and their components. It operates with a true file-based control system, eliminating the need for a PC. Built-in features include date coding and multi-level serialization, ensuring accurate and consistent identification. The system also supports network connectivity and barcode scanner input to minimize errors.

Features

- Permanent Identification
- Special fixture to hold the gun receiver or grip in place
- The History File may be accessed from the Windows Software Suite and printed, copied into a report or saved
- Traceability information is stored after & during each cycle
- Import graphics and logos
- Production data, including time and date stamps and a unique serial number, is recorded for each part
