

Windows Software Suite Optimize any Graphic Files

Optimizing the Marking files

The software includes an advanced optimize routine that streamline any of the import files to minimize point to point moves, providing the fastest cycle time possible.

In addition to the above, the image will appear “cleaner” because there are no excessive start / stop points that may degrade the quality.

In addition to the above, the look ahead feature will assure that the fastest path with not only the least movements, but also the least changes in velocity will be created.
