

# Application Bulletin

KT  
1000

## Marking Inside Diameters

The KT 1000 Inside Diameter marking attachment is designed to address the often “awkward” setup and tooling required to mark the inside surface of rings, tubes, etc.

A machine tool quality dual ball slide (with height adjustment) is used to support the marking head while it moves into the ID. The standard KwikTurn 5-C cylindrical attachment is used to rotate the part.

## Ideal for Rings, Tubes, Etc.

- Steel
- Aluminum
- Cast Iron
- Forgings / Castings
- Coated / Plated Surfaces
- Brass / Bronze
- Plastics
- Tool Steel (up to 60 Rc)

Driven from The KwikMark system

The KT 1000 is modular and easily removable from the Kwik Turn 5-C system.
