

# Kwik Turn

## Rotary & Indexing Attachment

---

### Highlights

The KwikTurn attachment adds another axis used to mark round parts or multi-sided parts. All of the software features of the Kwikmark System (serializing, date coding, graphics, etc) are retained. Includes: Headstock, Tailstock & Base.

Mounts to T-Slot Table  
For Quick Changeover

Shown with Optional Powered  
Pneumatic Tailstock

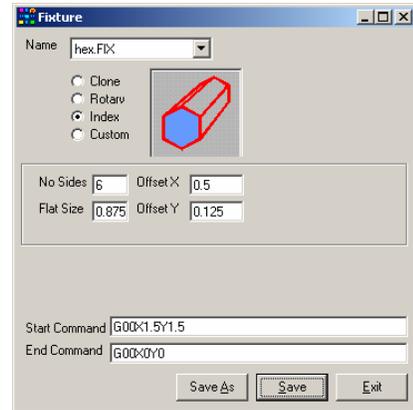

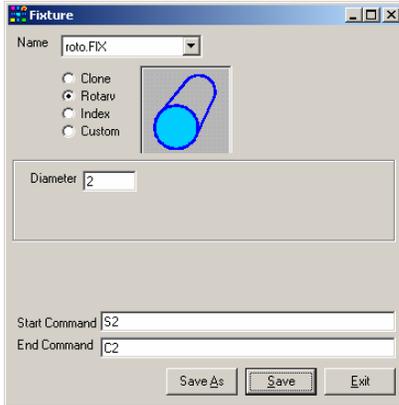

# Another Advantage of a File Based System:

Fixture Files streamline setting up your production

## CYLINDRICAL MODE

OR

## INDEXER MODE

### Rotary Fixture

For marking around cylindrical parts by turning them during the marking cycle

Just enter the diameter and the rotary fixture will “wrap” any text, graphics, etc in perfect proportion around your part.

May be used to mark round parts with files that were created for flat parts too!  
Commands may be entered to execute before and after the cycle.

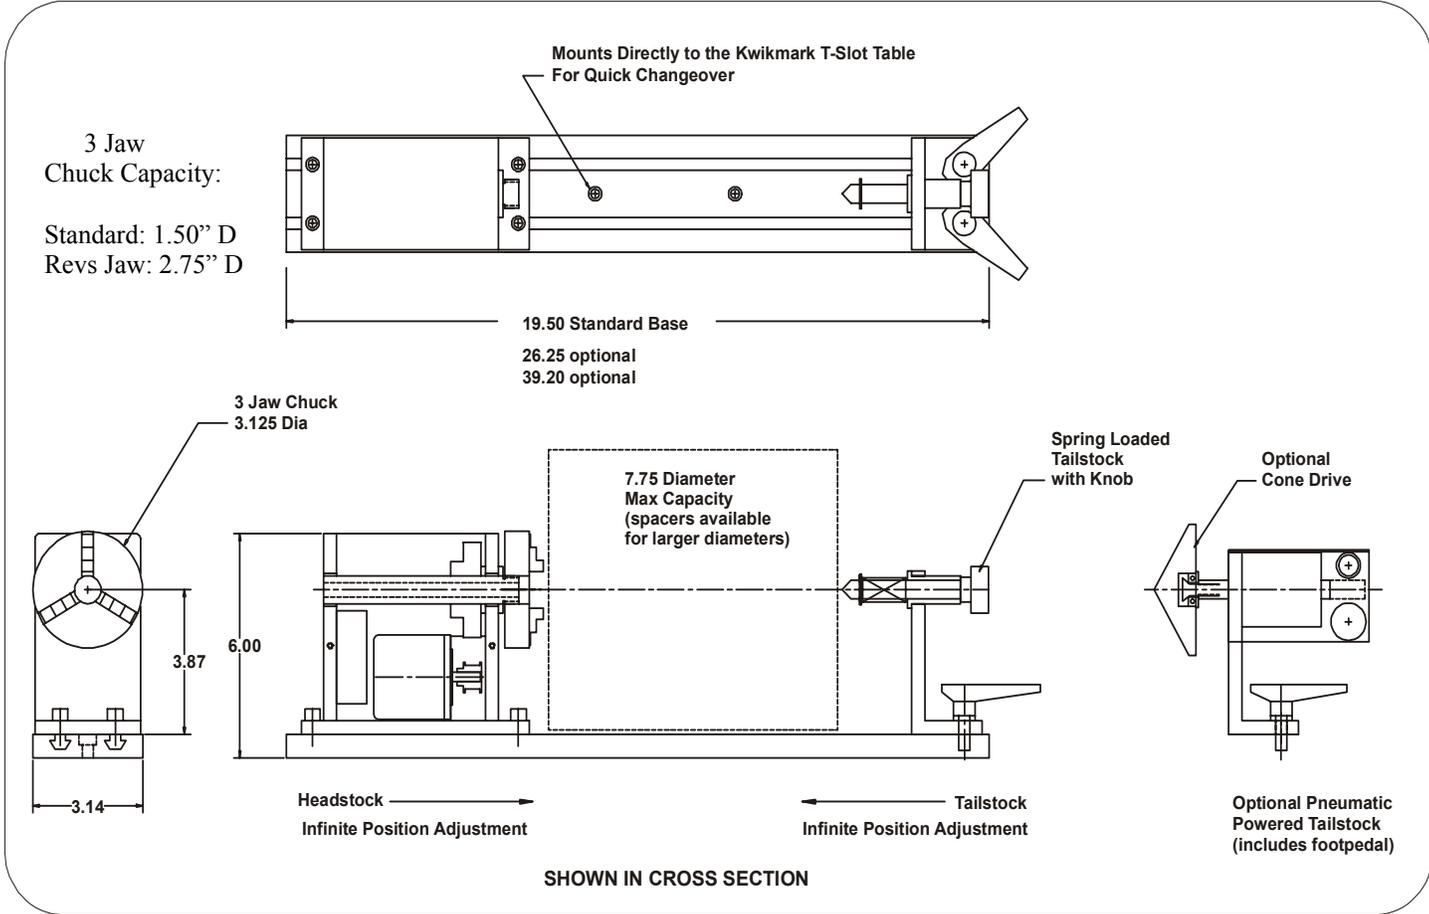

### Index Fixture

For marking flats on multi-sided objects by indexing the part to the proper flat position.

Just enter the number of sides and the size. Each line in the marking file may be set to automatically mark on any flat of the part

Any number of sides may be used!  
Commands may be entered to execute before and after the cycle.

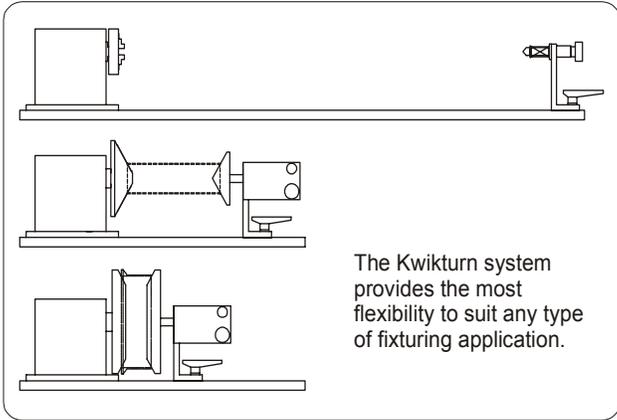

**HEAD STOCK Features**

- Oversized spindle & thrust bearings
- Pre-loaded drive system
- Brushless high torque motor
- Embedded high res motor driver
- One quick connect cable for operation

**3 JAW CHUCK Features**

- Hand operated (no tools)
- Removable (3/4-16 thread)
- Reversible jaws
- Grips on OD or ID
- Machine tool quality

**TAIL STOCK Features**

- Spring loaded actuation with knob
- Large .500 diameter center
- Quick release adjustment handles
- Easily customized

**Pneumatic Powered Tailstock OPTION**

- Footpedal operated
- Self contained controls
- Adjustable force control
- On board regulator / gauge
